

Your extended arm

Timber Tong

Straighten your back
-use the long Timber Tong

The timber tong has been made for firewood and small logs. The tong is 65 cm long which means you can work with your back straight when lifting and pulling timber. This working posture saves your back and helps you move larger logs. The link system makes the jaws work in parallel for a safer grip. The harder you lift the harder the jaws grip. This is very important when you handle larger logs.

Gripping width:

Small model: 21 cm

Bigger model: 26 cm

Weight: 1.3 kg

A new short Timber Tong with the handle turned 90° to the jaws. Useful when pulling logs for cutting.

You pull with your hand in a natural direction.

Gripping width:

Small model: 21 cm

Bigger model: 26 cm

Weight: 1.1 kg
