

BREATHABLE AIR KIT BAG

RIT PACK ONE provides breathing assistance to firefighters and other victims in a difficult situation.

Designed by firefighters, RIT PACK ONE bag carries the necessary equipment to prepare the victim(s) extraction work and exit in a rescue situation.

RIT PACK bag can hold a 6 to 9L capacity air cylinder with its quick adjustment system.

RIT includes a face piece compartment fitted with a handle easily recognizable in the dark. Another handle, totally different, allows an easy access to the bottle valve even with gloved hands.

The bag displays buckles on its 4 sides allowing:

- adaptable positioning of the carrying strap,
- to secure the bag in a vehicle compartment or locker.

The bag includes a rigid shell that can be replaced as needed as well as a carrying strap offering different carrying modes according to the situation. The RIT Pack bag is designed to be easily moved during progression.

RIT PACK ONE bag is made with high visibility and resistant materials, providing additional safety in a severely degraded environment.

Rescue and RIT teams can really rely on RIT Pack ONE as an efficient tool.
