

#SPIDERROPE

ARGIOPE EVO 11.7

The ARGIOPE 11.7 mm was the first rope ever to be spliced with a splice thin enough to go easily through mechanical devices such as the FREEXION, ZigZag or Spider Jack (Slim splice). It was a real innovation that helped arborists in their everyday work, and still does. Our ARGIOPE EVO ropes are still spliced with that technique and are very stable over time.

CLIMBING ROPE

DESCRIPTION

The ARGIOPE EVO 11.7 mm (100 % polyester) has become a classic among climbing ropes. It was originally tested during expeditions in the rainforest and by our field testers in Europe, in the meantime it has been chosen and confirmed by climbers all over the world.

Polyester allows the diameter to be constant over time, no swelling. Its 16-strand cover is thick, it provides a great resistance to abrasion and therefore a long lifespan.

Its elongation is limited, with 2.8% - a great balance between static and dynamic. You will not feel like climbing on a wire.

Of course, there still isn't any cover-to-core slippage, so both ends can be spliced. It's the perfect rope for both SRT and DRT. Our splices are very thin, flexible and can be pulled through mechanical devices like the FREEXION, the ZigZag or the SpiderJack.

This very bright rope is highly visible in trees, with the moiré-effect of its cover. There are 2 colours to choose from: the ARGIOPE EVO Blue, for those who love the original colour, and the ARGIOPE EVO Berry.

The ARGIOPE EVO 11.7 comes with one or two splices, and in the following standard lengths: 20 m, 25 m, 30 m, 35 m, 40 m, 45 m, 50 m, and 60 m. You need another length? Our splicers can splice custom lengths, just contact your distributor!

TECHNICAL INFORMATION

Standard	EN 1891 Type A
Diameter	11,7 mm - 16 strands
Material	100 % polyester
Weight	103 g/m
Cover slippage	0 % (no cover-to-core slippage)
Elongation	2,8 %
Knotability	0,7
MBS	28,9 kN
Colour	Blue : moiré blue and white Berry : moiré violet, flash green, white and black
